Mrs. DIY DAX Measurement

Create DAX **new calculated column** to replace "**Unknown**" into a value of Early, On Time and or Late

```
Delivery Timing New =
VAR OrderDate = Shipping[Order Date]
VAR DeliveredDate = Shipping[Delivered Date]
VAR DaysDifference =
    IF (
        ISBLANK(OrderDate) || ISBLANK(DeliveredDate),
        BLANK(), // Return BLANK if either date is missing
        DeliveredDate - OrderDate
    )
RETURN
    IF (
        ISBLANK(DaysDifference),
        "#DIV/0!", // If DaysDifference is BLANK, categorize as "#DIV/0!"
        IF (
            DaysDifference <= 10,
            "Early",
            IF (
                DaysDifference <= 20, // This covers > 10 and <= 20
                "On Time",
                "Late" // This covers > 20
            )
        )
    )
```

Using DAX to calculate **Profit Margin, Total Profit** and **Total Sales**

```
Profit Margin = DIVIDE([Total Profit], [Total Sales], 0)
```

```
Total Profit = SUM('Orders'[Profit])
```

```
Total Sales = SUM('Orders'[Sales])
```
